Screw - Wikipedia

Explanation. A screw is a combination of simple machines: it is, in essence, an inclined plane wrapped around a central shaft, but the inclined plane (thread) also comes to a sharp edge around the outside, which acts a wedge as it pushes into the fastened material, and the shaft and helix also form a wedge at the point. Some screw threads are designed to mate with a ...

The computer-cut kit is intricately designed and highly evolved to suit fast and easy construction, including by first-time builders. Hull panels are snapped together with "puzzle joints," and all of the holes for the temporary wire stitches have been drilled in advance. Plans builders are provided with full-sized patterns for every part.

So I have found out that a heat shield protects parts of the underside of a car from the heat of the exhaust pipe(s). It's a formed sheet of metal that is bolted to the underside of the car. The problem was that the mounting holes in the metal sheet had corroded and become larger than the bolts and washers holding it on, leading to nasty rattling.
