Dear Twitpic Community - thank you for all the wonderful photos you have taken over the years. We have now placed Twitpic in an archived state.

Evaluating Hazards and Assessing Risks in the Laboratory ...

A key element of planning an experiment is assessing the hazards and potential risks associated with the chemicals and laboratory operations to be used. This chapter provides a practical guide for the trained laboratory personnel engaged in these activities. Section 4.B introduces the sources of information for data on toxic, flammable, reactive, and explosive chemical substances.

High-Rise Building Definition, Development, and Use

Quincy, MA: National Fire Protection Association; August 2005:1. For example, in the United States, commonly recognized as the home of the first high-rise, “NFPA 101 [Life Safety Code ®] defines a high-rise building as a building more than 75 ft (22.5 m) in

height where the

Hazen–Williams equation - Wikipedia

The Hazen–Williams equation is an empirical relationship which relates the flow of water in a pipe with the physical properties of the pipe and the pressure drop caused by friction. It is used in the design of water pipe systems such as fire sprinkler systems, water supply networks, and irrigation systems. It is named after Allen Hazen and Gardner Stewart Williams.
