Refracting telescope - Wikipedia

A refracting telescope (also called a refractor) is a type of optical telescope that uses a lens as its objective to form an image (also referred to a dioptric telescope).The refracting telescope design was originally used in spy glasses and astronomical telescopes but is also used for long-focus camera lenses.Although large refracting telescopes were very popular in the second half of the ...

The Constellations | IAU

Forty eight of the constellations we know were recorded in the seventh and eighth books of Claudius Ptolemy's Almagest, although the exact origin of these constellations still remains uncertain. Ptolemy's descriptions are probably strongly influenced by the work of Eudoxus of Knidos in around 350 BC.

Maksutov telescope - Wikipedia

The Maksutov (also called a "Mak") is a catadioptric telescope design that combines a spherical mirror with a weakly negative meniscus lens in a design that takes advantage of all the surfaces being nearly "spherically symmetrical". The negative lens is usually full diameter and placed at the entrance pupil of the telescope (commonly called a "corrector plate" or "meniscus corrector shell").

GETTING STARTED IN ASTRONOMY - Sky & Telescope

The telescope you want has two essentials. One is high-quality, "diffraction-limited" optics. The other is a solid, steady, smooth-ly working mount. You may also want large aperture (size), but don't lose sight of port-ability and convenience. Remember, the best telescope for you is the one you'll actually use. Many telescopes have built ...

GETTING STARTED IN ASTRONOMY - Sky & Telescope

The telescope you want has two essentials. One is high-quality, “diffraction-limited” optics. The other is a solid, steady, smooth-ly working mount. You may also want large aperture (size), but don’t lose sight of port-ability and convenience. Remember, the best telescope for you is the one you’ll actually use. Many telescopes have built ...
